Handbook of

# Inductively Coupled Plasma Atomic Emission Spectrometry

by
Michael Thompson
and J Nicholas Walsh

**Viridian Publishing**

# Contents

**1 Introduction** **1**

1.1 Preliminary–purpose and scope of book 1
1.1.1 The ICP as a spectroscopic source 1
1.1.2 Applications of the ICP 3
1.1.3 Simplicity of the ICP technique 3
1.1.4 The literature of ICP–AES 4
1.2 Historic development of ICP spectrometry 5
1.3 Background to quantitative ICP analysis 7
1.3.1 Sample introduction (nebulization) 8
1.3.2 Sample excitation system 9
1.3.3 Analysis and quantification of emission spectrum 12
1.4 Range of determinable elements in geological materials 14

**2 Analytical characteristics** **16**

2.1 Introduction 16
2.2 Simultaneous analysis 19
2.2.1 Compromise operating conditions 19
2.3 Sequential analysis ICP system 23
2.4 Detection limits 24
2.5 Calibration range of ICP–AES 25
2.6 Interferences 26
2.6.1 Spectral overlaps 27
2.6.2 Stray light interference 29
2.6.3 Matrix effect 30
2.7 Precision and accuracy 32
2.7.1 Chemometric improvements to data quality 34
2.8 Experimental considerations 37
2.8.1 Solution volumes and sample weights 37
2.8.2 Number of elements determined in liquid samples 38
2.8.3 Number of elements determined in solid samples 39
2.9 The injection of organic liquids into an ICP 40

**3 Instrumentation for ICP–AES** **43**

3.1 Introduction 43
3.2 Spectrometers 45
3.2.1 General requirements 45
3.2.2 Simultaneous spectrometers 47
3.2.3 Sequential spectrometers 55
3.2.4 Combined simultaneous/sequential spectrometers 59
3.3 Plasma torches 59
3.3.1 Nomenclature 59
3.3.2 The Greenfield torch 60
3.3.3 The Fassel torch 60
3.3.4 The Minitorch™ 64
3.3.5 Torch maintenance 65
3.4 Nebulizer systems 66
3.4.1 Introduction 66
3.4.2 Concentric pneumatic nebulizers 66

3.4.3 Cross-flow nebulizers 72
3.4.4 Babington-type nebulizers 74
3.4.5 Frit-type nebulizers 75
3.4.6 Ultrasonic nebulizers 76
3.4.7 Direct nebulization 77
3.4.8 Spray chambers 77
3.5 Radiofrequency generators and source 80
3.6 Electronics, computers and software 81
3.6.1 Software requirements 82
3.6.2 Trends 83
3.7 Fourier transform spectrometers 83
3.8 ICP-atomic fluorescence spectrometry 85
3.9 Direct current plasmas (DCP) 86
3.10 Microwave plasmas (MIP) 88
3.11 Choice of an ICP system 88
3.11.1 ICP-AES in relation to AAS 88
3.11.2 ICP-AES and X-ray fluorescence 89
3.11.3 ICP-AES and DCP emission spectrometry 90
3.11.4 ICP-AES and ICP-mass spectrometry 90
3.11.5 ICP-AES and other excitation methods 91
3.11.6 Evaluation of an ICP–AES system 92

**4 Silicate rock analysis 93**

4.1 Dissolution methods for silicates 93
4.1.1 Introduction 93
4.1.2 Fusion dissolution methods 93
4.1.3 Hydrofluoric acid dissolution methods—open evaporation 95
4.1.4 Hydrofluoric acid dissolution methods—closed digestion 96
4.2 Instrument calibration 99
4.3 Major element determinations 100
4.4 Trace element analysis 105
4.5 Rare earth element determinations 120
4.5.1 Introduction 120
4.5.2 Dissolution procedure 122
4.5.3 REE separation 124
4.5.4 REE spectral lines 125
4.5.5 Evaluation of results 127

**5 Multielement applications of ICPS in applied geochemistry 130**

5.1 The nature and evolution of applied geochemistry 130
5.1.1 Introduction 130
5.2 General aspects of applied geochemical analysis 131
5.2.1 Analytical requirements in applied geochemistry 131
5.2.2 Analytical quality control procedures 133
5.3 ICP instrumentation in relation to the requirements of applied geochemistry 137
5.3.1 Introduction 137
5.3.2 Translational interference effects 138
5.3.3 Rotational interference effects 141
5.3.4 Other instrumental constraints in multielement analysis 145
5.4 Decomposition procedures in applied geochemical analysis 147
5.4.1 Introduction 147
5.4.2 General aspects of large-batch analysis 150
5.4.3 Decomposition with nitric acid and perchloric acid 155
5.4.4 Decomposition with hydrofluoric acid, nitric acid and perchloric acid (test tube version) 156

**6 Gas phase sample injection 161**

6.1 The development of gas phase injection methods 161
6.2 Methodology of the hydride injection system 164
6.2.1 Equipment 164
6.2.2 Operating conditions 166
6.2.3 Performance of the hydride generation/ICP system 167
6.2.4 Interference effects and their avoidance 170
6.2.5 Arsenic speciation methods 173
6.3 Applications of the hydride injection system 173
6.3.1 General introduction 173
6.3.2 Traces of arsenic, antimony and bismuth in soils and sediments 174
6.3.3 Traces of arsenic, antimony and bismuth in plant materials 176
6.3.4 Trace concentrations of selenium in soils and sediments 177
6.3.5 The determination of trace concentrations of arsenic, antimony, bismuth, selenium and tellurium in waters 178
6.3.6 The determination of tin in rock, soils and sediments 180

**7 Injection methods for solid samples 183**

7.1 Introduction to solid sample injection methods 183
7.2 Sample injection following electrothermal vaporization 184
7.3 Direct sample injection from a graphite rod 187
7.4 Discrete sample injection by means of laser ablation 188
7.4.1 General introduction 188
7.4.2 The Lasertrace system 190
7.4.3 The LMA10 laser-ICP microprobe system 191
7.5 Nebulization of slurries 199

**8 Water analysis by ICP–AES 201**

8.1 Introduction 201
8.2 General aspects of water analysis 203
8.2.1 Sampling 203
8.2.2 Filtration 203
8.2.3 Storage 204
8.2.4 Stabilization 204
8.2.5 Avoidance of contamination 204
8.3 Direct water analysis by ICP–AES 205
8.3.1 Pneumatic nebulizers 205
8.3.2 Alternative nebulizers 207
8.3.3 Gas phase injection 208
8.3.4 Electrothermal vaporization and other discrete methods 208
8.4 Water analysis with preconcentration 209
8.4.1 Evaporation methods 209
8.4.2 Mixed-bed ion exchange method 210
8.4.3 Selective ion exchange methods 210
8.4.4 Solvent extraction methods 210
8.4.5 A chelation—solvent extraction procedure 211
8.4.6 Coprecipitation methods 213

**9 The analysis of environmental materials by ICP–AES 215**

9.1 Introduction 215
9.2 Air analysis 216
9.2.1 Volatile contaminants 216
9.2.2 Particle contaminants 217
9.3 Sewage sludge 219

9.4 Domestic dust, road dust and industrial dust 220
9.4.1 Domestic dusts 220
9.4.2 Road dusts 220
9.4.3 Industrial dusts 223
9.5 Domestic and industrial refuse 223
9.6 The analysis of animal and plant tissues 224
9.6.1 General introduction 224
9.6.2 Sample decomposition of biological materials 227
9.6.3 Destruction of organic matter in plant and animal tissue with perchloric acid–nitric acid mixtures 230

**10 The analysis of archaeological materials by ICP-AES 232**

10.1 Introduction 232
10.2 Archaeological materials 233
10.2.1 Analysis of flints 233
10.2.2 Pottery and clay analysis 235
10.2.3 Analysis of bricks, tiles, glazes, etc. 236
10.2.4 Analysis of metals 236
10.2.5 Analysis of slags and ores 237

**11 Inductively coupled plasma mass spectrometry 238**

11.1 Instrumentation 238
11.2 Optimization 242
11.3 Interferences 243
11.3.1 Spectral interferences 243
11.3.2 Non-spectral interferences 246
11.4 Calibration strategies 247
11.4.1 External 248
11.4.2 Isotope dilution 249
11.4.3 Standard additions 251
11.5 Applications of ICP–MS with sample introduction by nebulization 251
11.5.1 Elemental analysis of solubilized geological samples 252
11.5.2 Isotope ratio measurements 257
11.5.3 Analysis of waters 260
11.6 Other modes of sample introduction 262
11.6.1 Electrothermal vaporization (ETV) 262
11.6.2 Direct sample insertion device (DSID) 265
11.6.3 Laser ablation of solids 265
11.6.4 Arc nebulization (solid sampling) 267
11.6.5 Slurry nebulization (solid sampling) 267
11.7 Future directions 268

**12 Analysis of metals by ICP-AES 270**

12.1 Introduction 271
12.1.1 Instrument calibration 272
12.1.2 Internal standards 272
12.1.3 Sample preparation and dissolution 273
12.2 Analysis of iron and steel 274
12.2.1 Spectral lines 274
12.2.2 Sample dissolution 274
12.3 Analysis of other metals 276
12.3.1 Virgin aluminium program 277
12.3.2 Titanium-boron-aluminium program 278
12.3.3 Zirconium-aluminium program 279
12.3.4 Chromium program 280
12.3.5 Chrome carbon program 281

12.3.6 Nickel-cobalt alloy program 281
12.3.7 Ferro-boron program 281
12.3.8 Nickel-boron program 283
12.3.9 Copper base program 283
12.3.10 Stellite program 284
12.3.11 Manganese tablet program 285
12.3.12 Ferro-aluminium program 285

**Appendix 1** Safety **287**
**Appendix 2** Manufacturers of ICP systems and accessories **291**
**References** **294**
