Handbook of

Atomic Absorption & Fluorescence Spectrometry

by
Gordon F Kirkbright
&
Michael Sargent

Viridian Publishing

Contents

Preface v

Chapter 1 Introduction

1.1 Historical aspects 1
1.2 Fundamentals 4
1.3 Comparison of techniques 7
1.4 Previous books and reviews 11
References 13

Chapter 2 Spectroscopic Theory

2.1 Introduction 17
2.2 Atomic spectra and atomic energy levels 19
2.3 The emission and absorption of energy 26
2.4 Distribution of atomic population 30
2.5 Width of spectral lines 34
References 46

Chapter 3 Theory of Atomic Absorption Measurements

3.1 Introduction 47
3.2 The absorption coefficient 48
3.3 The total absorption factor, A_T 52
3.4 The absorbance, A, for a sharp line source 56
3.5 Practical atomic absorption methods 57
References 63

Chapter 4 Theory of Atomic Fluorescence Measurements

4.1 Introduction 65
4.2 An ideal fluorescence intensity 66
4.3 Types of atomic fluorescence 68
4.4 Calculations of actual fluorescence intensity 76
4.5 Quenching of fluorescence 82
References 95

Chapter 5 Spectral Light Sources

5.1 Introduction 97
5.2 Hollow-cathode lamps 101
5.3 Electrodeless-discharge lamps 145
5.4 Other light sources 177
References 191

Chapter 6 Flames

6.1 Introduction 197
6.2 Properties of premixed laminar flames 203
6.3 Application of premixed laminar flames to atomic absorption and fluorescence spectroscopy 222
6.4 Other flame cells used in analytical spectroscopy 260
6.5 Atomization of nebulized samples in the flame 269
References 282

Chapter 7 Non-flame Absorption and Fluorescence Cells

7.1 General considerations 287
7.2 Furnaces 288
7.3 Filaments and open cells 302
7.4 Cathode sputtering cells 308
7.5 Other types of atom cell 312
References 314

Chapter 8 Introduction of Liquid Samples into Flame Atom Cells

8.1 Introduction 317
8.2 Pneumatic nebulizers 318
8.3 Non-pneumatic nebulizers 334
8.4 Discrete sampling devices 338
References 342

Chapter 9 Wavelength Selection

9.1 Introduction 345
9.2 Conventional monochromators 353
9.3 Other monochromating devices 367
References 379

Chapter 10 Atomic Absorption and Fluorescence Instrumentation

10.1 Radiation detectors 382
10.2 Signal processing 402
10.3 Enhancement of signal-to-noise ratios 414
10.4 Optical systems 423
10.5 Burner systems 433
References 438

Chapter 11 Practical Techniques of Atomic Absorption and Fluorescence Spectroscopy

11.1 Selection of wavelength of measurement 442
11.2 Optimization of instrumental conditions 448
11.3 Analytical sensitivity 461
11.4 Instrument operation 470
11.5 Precision and accuracy 480
11.6 Pretreatment of samples 485
11.7 Pre-concentration and separation techniques 491
References 501

Chapter 12 Interferences

12.1 Physical interferences 507
12.2 Chemical interferences 514
12.3 Spectral interferences 531
References 538

Chapter 13 Analytical AAS and AFS Characteristics of the Elements and Applications Data

13.1 Introduction 542
13.2 Terminology and abbreviations 543
13.3 General Notes 544
13.4 Elements and applications data 545

Chapter 14 Special Techniques in AAS and AFS

14.1 Introduction 719
14.2 Application of indirect methods in analysis by atomic absorption 719
14.3 Isotope analysis by atomic absorption spectroscopy . . . 742
14.4 Laser-excited atomic fluorescence spectroscopy 751
14.5 Measurement of flame temperatures by AAS and AFS . . 762
References 770

Subject Index 775
